

Dormancy 9 - Sequel is a dormancy 9 variety with high levels of forage production all year round, particularly during the winter period. It is suitable for short to medium term rotations due to its erect exposed crown which can be easily damaged under grazing systems and leads to shortened stand life. Showing good pest and disease resistance ratings, Sequel is suitable for both dryland and irrigated situations.

- Dormancy Rating 9
- Good resistance to pest and diseases however displays susceptibility to Stem Nematode and Bacterial Wilt
- Replaced by ML99, L91 & L92 in many markets
