

Turbo produces more feed during autumn and winter than traditional Persian clovers, and will continue well into spring under Australian conditions.

- Tall erect mature growth for easy manageability
- Rapid autumn and winter seedling vigour for better establishment
- High growth rates and production in all seasons, particularly in late autumn/winter
- Developed for flexibility in grazing and multi-cut production
- Suitable for silage, hay and grazing
- Balanced companion legume with annual and short term grasses
- Good frost tolerance
- High tolerance to diseases, particularly rust
- Excellent quality forage of high nutritive value
