

Cobra is an early to very early flowering hardseeded Balansa Clover. It is an aerial seeded type, suitable for self regeneration in the long-term pasture phase. Cobra has a larger seed size in comparison to Frontier, that offers greater seedling vigour, early plant growth and larger flowering head size. Cobra offers exceptional seed yielding characteristics that will allow for a high seed down during the pasture phase. This will supply a long term legume base in low to medium rainfall zones. Excellent winter growth in comparison to other balansa clovers.

- Earliest flowering hard seeded on the market
- Can be grown down to 200mm rainfall zones
- Excellent seed down for long term pasture phase
- Very good salt tolerance
- Tolerates water logging soil types
- Excellent winter growth in comparison to other balansa clovers
