

Renegade is an erect, early flowering, double cut red clover with improved resistance to southern anthracnose and downy mildew. Renegade is classified as semi-dormant in winter growth habit, and provides more grazing than Ladino clover during hot summer months. Renegade is a short lived forage perennial legume best adapted to temperate regions with high to medium rainfall. It tolerates more soil acidity and poorer soil drainage than alfalfa.

- Excellent hay type for top end forage
- High yielding
- Supreme feed quality
- Good persistence
- High protein
- Disease resistant
