

Moby is an early maturing, 6 row, white seeded awnless barley with excellent winter growth and rapid establishment. Leaf size varies according to environmental conditions and is more comparable with oat varieties than traditional barley types. Moby will tolerate multiple grazings until the production of the first node. Being winter active, Moby offers an extended sowing window compared to forage oats from mid autumn to mid winter. Seedling vigour in Moby is exceptional, being first to grazing in all Pasture Genetics forage cereal trials conducted to date. Moby has shown significant versatility, adapting to a large range of sowing conditions and environments. Disease resistance appears typical of other commercial barley cultivars with good net blotch resistance, adequate field leaf scald and spot blotch resistance.
