

- Q31 is set to become the leading hay and chaffing variety for premium markets.
- Q31 has a superior leaf retention trait and the highest nutritive value in retained leaf in feed and hay, combined with high yields and excellent quality for hay, chaff, silage and grazing.
- It demonstrates greater persistence than winter active varieties, when persistence is more important than winter growth.
- Q31 is ideally suited to irrigation and dryland pastures in cold climate areas. The superior leaf retention trait leads to improved quality lucerne to be sold into premium markets.
- Q31 was bred for specialist irrigated haymaking, silage or chaff where premium quality is required and where hay cannot be made in winter. Ideally suited to leaders in forage quality.
