

Perun Festulolium is an inter species cross combining 80% Italian Ryegrass with 20% Meadow Fescue. Perun offers the quality trait from the Italian ryegrass plus the adaption and root depth of the Meadow Fescue. This allows for a wider adaption of soils and rainfall zones that in the past have not been able to sustain straight Italian Ryegrass. Perun has a longer summer shoulder that provides good quality when feed quality traditionally drops. With Perun being a fescue cross it prefers to be sown in warmer soil conditions experienced in the early autumn or Perun can be utilised as a spring sowing option for a summer feed option in good rainfall or irrigated areas. Perun is an excellent option for stitching into existing pastures such as Lucerne. Perun also has the ability for low transpiration rates through the leaf surface over the summer.

- Good Disease Resistance
- Great heat and cold tolerance unlike Italian Ryegrasses
- Recommended sowing with red and white clover
