

After an absence from Australian agriculture, Pasture Genetics have been asked by many key farmers and seed suppliers across Australia to bring back Impact. We are pleased to announce that the much loved and trusted Long Rotation Ryegrass is now available. Impact was a leap ahead of its time in regards to forage production and the extended flowering and growth period that it offers.

- Impact flowers +21 days later than Nui Ryegrass.
- Impact has good persistence similar to perennial ryegrass.
- Very fine and densely tillered.
- Excellent winter production with late season shoulder based on moisture availability, therefore delivering extended periods of high quality grass forage going later into the spring/ summer period.
- Low level of aftermath heading therefore reducing the Impact of staggered ear emergence reducing feed quality.
- Low Endophyte type.
