

**Rainfall 400mm+****Highly intensive legume pasture**

A high density legume mix suited to medium and higher rainfall zones that provides outstanding dry matter production and nitrogen fixation. A HDL break crop in rotation is also an effective and profitable way of managing herbicide resistant annual ryegrass. A vigorous SOWsmart<sup>®</sup> HDL blend can contribute up to 50 kg/ha of nitrogen for subsequent crops, the equivalent of 100 kg/ha of urea.
